## Skill 1.1 Multiplying a large number by a multiple of 10.

MM5.2 1 1 2 2 3 3 4 4  
MM10 1 1 2 2 3 3 4 4

- Consider the zeros as making groups of 10's or 100's and place them at the end.
- Then multiply by the remaining digit as though it was a unit.

Q.  $589 \times 700 =$

A. **412300**

$$\begin{array}{r} \overset{6}{5} \overset{6}{8} \overset{6}{9} \\ \times \quad \quad \quad \overset{6}{7} \overset{6}{0} \overset{6}{0} \\ \hline \overset{6}{4} \overset{6}{1} \overset{6}{2} \overset{6}{3} \overset{6}{0} \overset{6}{0} \end{array}$$

Consider 700 as 7 groups of 100.

Multiply 589 by 7.

To show we want groups of 100, place two zeros after the 4123.

### Skill 1.3 Multiplying a large number by a large multiple of 10.

- Consider the zeros as making groups of 10's or 100's and place them at the end.
- Multiply by the units first, then by the tens.

**Q.**  $382 \times 230 =$

**A.**  $87860$

$$\begin{array}{r} \phantom{0}382 \\ \times \phantom{0}230 \\ \hline 1146 \\ 7640 \\ \hline 87860 \end{array}$$

Consider 230 as 23 groups of 10.

Work with the 23 first.  
Multiply 382 by 3.  
Then multiply 382 by 20.  
Add these results.

To show we want groups of 10,  
place a 0 after the 8786.

# Skill 1.4 Dividing a large number by a single digit.

- Break down the division into smaller divisions.
- Work from left to right.

Q.  $2835 \div 7 =$

A. **405**

$$\begin{array}{r} 405 \\ 7 \overline{) 2835} \end{array}$$

Starting at the left, divide 7 into 2. 7 does not divide into 2 at least once so 'carry over' the 2 groups of 1000 and make 28 groups of 100.

7 divides into 28 four times and 0 remainder. Write a 4 above the 8.

Then divide 7 into 3. 7 does not divide into 3 at least once so 'carry over' the 3 groups of 10 and make 35 groups of 1. Write a 0 above the 3.

7 divides into 35 five times and 0 remainder. Write a 5 above the 5.

## Skill 1.5 Dividing a large number by a power of 10.

MM5.2 1 2 2 3 3 4 4  
MM10 1 1 2 2 3 3 4 4

### EITHER

When the whole number ends in the same number of zeros or more zeros than the power of 10:

- Take off as many zeros in the whole number as there are zeros in the power of 10.

Example:  $54\ 000 \div 10 = 5400$   
 $54\ 000 \div 100 = 540$   
 $54\ 000 \div 1000 = 54$

### OR

When the whole number ends in less zeros than the power of 10:

- Move the decimal place to the left as many places as there are zeros in the power of 10.

Example:  $3070 \div 100 = 30.\overline{70} = 30.7$

Hints: Any zero at the end of the number and to the right of the decimal point can be removed.

A decimal point would be at the end of a whole number but is not written by convention, e.g.  $3070 = 3070.0$

**Q.**  $48\ 670 \div 1000 =$

**A.**  $48\ 670 \div 1000$   
 $= 48670.0 \div 1000$   
 $= 48.\overline{670}$   
 $= 48.67$

There are 3 zeros in 1000 so move the decimal point 3 places to the left.

The zero on the right can be removed.

**Skill 1.7** Dividing a whole number by a two-digit number (1).

MM5.2 11 22 3 44  
MM10 11 2 3 44

- Work from left to right.
- Break down the division into smaller divisions by dividing into only as many digits as you need to get an answer greater than 1.
- It may be difficult, so guess the number of divisions and multiply your guess to check.
- Subtract your answer from the original number to get the remainder, which must be less than the number you are dividing by.
- Continue in this way by bringing down the next digit to make the next number to divide into.
- Repeat until the result of the subtraction is zero.

**Q.**  $1026 \div 19 =$

**A.** 54

$$\begin{array}{r}
 \phantom{19} \overline{) 1026} \\
 \underline{-95} \phantom{0} \\
 76 \\
 \underline{-76} \\
 0
 \end{array}$$

Start at the left.

1 and 10 are too small to divide 19 into and get a result greater than 1.

Divide  $102 \div 19 = ?$

19 is nearly 20 so 5 is a good guess.

Check by multiplying  $5 \times 19 = 95$

Subtract  $102 - 95 = 7$

Write 5 above the 2.

Bring down the 6

Divide  $76 \div 19 = ?$  (Guess 4)

Check by multiplying  $4 \times 19 = 76$

Subtract  $76 - 76 = 0$  (No remainder)

Write 4 above the 6.

OR Work as a short division.
